PROFESSIONAL SUMMARY

Software engineering graduate with hands-on IT experience at BC Hydro across application support, access control, automation and documentation. Supports Field Service Representatives on AMS systems and field tools through the ticketing system and on-call rotation, and builds Python and PowerShell tools that remove manual work, including an access-audit tool that cut processing time by 80%. Experienced running access reviews with security group owners, designing a software audit process for production jumphosts, and writing SOPs and build guides adopted by the support team.

TECHNICAL SKILLS

Scripting & Development: Python (pandas), PowerShell, SQL, JavaScript (Next.js, React Native), REST APIs, Git.
Systems & IT Operations: Windows, Linux (CentOS) administration, Docker, SSH, DNS, ticketing, incident/change management.
Security & Access Control: access reviews, security groups, software audits, OnGuard, HSM PED key reconciliation.
Data & Reporting: SQL, PostgreSQL, Snowflake, dbt, Excel, Power BI, Tableau.
Cloud & Documentation: AWS (S3, Lambda, DynamoDB, IAM), Supabase; SOPs, root-cause analyses, build guides, user guides.

WORK EXPERIENCE

IT Application Support Specialist, *BC Hydro* Burnaby, BC | Jun 2025 – Present

- Provide day-to-day support to Field Service Representatives for AMS systems, field tools and devices; track, resolve and escalate tickets and serve on-call for production issues.
- Contribute to incident and change management and software testing for AMS applications.
- Built and maintain a Python (pandas) tool for quarterly Meter Lab access reviews, reconciling four sources from the OnGuard access-control system to flag added/removed users, duplicates and access changes; cut processing time by 80%.
- Validate access changes each quarter with five security group owners and maintain the master access dataset; automated audit reports to Excel and HTML, and added a version-checked launcher and Word user documentation.
- Designing a software audit process for three AMS production jumphosts; updated the AMS Jumphost Build Guide to v1.0.
- Perform key reconciliation for HSM PED devices; authored audit and root-cause-analysis SOPs adopted across the support team, reducing mean-time-to-resolution on P1 issues.

Computer Vision Engineering Intern, *Business and Technology Services* Astana, Kazakhstan | May 2024 – Aug 2024

- Built Python and OpenCV preprocessing and augmentation workflows and labeled a 1,000+ image dataset for model training.
- Trained a YOLOv8 model that improved sitemap orientation prediction accuracy by 7%.

Smart Meter Data Analyst Co-op, *BC Hydro* Langley, BC | Sep 2023 – Apr 2024

- Developed PowerShell scripts automating routine diagnostic checks, reducing manual processing time by 50%.
- Monitored smart metering networks of 2M+ devices, diagnosing malfunctions to maintain 99% uptime.
- Coordinated with field crews on device installations, accelerating deployment schedules by 5%.
- Produced weekly device health reports with SQL and Excel, and built Power BI and Tableau dashboards for stakeholders.

PROJECTS

ULES - FoodTech Marketplace App, *Co-founder*

- Building a web and mobile marketplace for the Kazakhstan market with Next.js, React Native and Supabase.
- Self-host the backend on a Linux cloud server with Docker, SMTP email authentication, monitoring and hardening.
- Integrated an SMS one-time-password API, evaluated geocoding and payment providers, and configured DNS.

Airbnb End-to-End Analytics Warehouse

- Built an ELT pipeline into a layered Snowflake warehouse with dbt, with automated data tests and SCD Type 2 history tracking.

EDUCATION

Bachelor of Software Engineering, *Thompson Rivers University* Kamloops, BC | Sep 2020 – May 2025

- GPA: 4.06/4.33 — Dean's List every semester; Teaching Assistant for Engineering Design II.
- Awards: TELUS Excellence in Science $1,000 (2025), Eng & Geoscientists BC $1,000 (2022), Undergraduate Research Apprenticeship ×2 (2022, 2023).
